

# Change. Get ready for it.

Windows 10 is here, and your applications and environment need to be ready for the unique challenges of the new **Windows-as-a-Service** model.

It's not just about compatibility, it's about platform Readiness.

Readiness isn't just about getting your applications to work, it's also about keeping them secure, updated and working through ever accelerating **change**.

**readiness**  
POWERED BY CHANGEBASE

## Windows 10 OS compatibility assessment and conversion.

**Zero infrastructure required.  
Consumption-based pricing model.**

### Desktop/server application assessment

Assess and remediate your applications for Windows 10 and Server 2016 or Windows Server 2012 R2.

Corporate standards compliance.

Dynamic queries and user-created reports.

### Browser assessment

Detect web application compatibility issues with IE8-11 and Firefox ahead of time.

Virtual desktop and RDS assessment.

### Microsoft Office dependency assessment

Identify Office-dependant applications that may fail after a migration.

Assess virtual, server-hosted and client compatibility in a single scan.

- **Auto-remediation:** Apply auto-fixes individually or in bulk to applications to accelerate application delivery.
- **Application standardization:** Test your packages for in-house and industry packaging standards and apply automated fixes and updates.
- Test the latest Windows updates and patches automatically before deployment: maintain security, reduce deployment times.

# This changes everything.

# Readiness means:

## Compatibility

Your applications have to work on Microsoft Windows 10 and Server 2016. While most applications should work, some will require changes to their installation routines.

## Security

You don't have wait long until the next security crisis. Keep your application portfolio up to date and also ensure that you have the information you need to plan for potential conflicts or patch issues.

## Suitability

Virtualisation and VDI platforms will play an increasingly large role in your deployment strategy. Choose the platform for your portfolio and ensure that each application is right for your chosen virtualisation technology.

## Quality

Compliance with corporate standards ensures a faster, more consistent deployment. Troubleshooting is quicker, and future changes and updates can be performed with confidence.

## No surprises.

Previous software solutions required dedicated hardware, database servers and specialist technical expertise. With Readiness, you need only a browser—any browser, any OS—and nothing else. Manage your desktop portfolio from your desktop, from a tablet or even your phone.

- Zero infrastructure required for assessment **or** conversion.
- No client requirements.
- Use your own custom designed build and server configurations
- Consumption-based license model. Pay for what you use.
