

Your Domino apps, everywhere

HCL Domino is a stable and secure platform for developing and hosting enterprise applications. From IT to business, HCL Domino is the only low- to pro-code application development platform that allows your business to build robust applications to solve workflow and process challenges fast. Thousands of companies — big and small — use Domino apps to run their business.

HCL Nomad brings the power of HCL Domino applications beyond the desktop, directly to where your users need to be. Get the same applications, unparalleled security, and offline capabilities — now on mobile. Deliver your apps on Apple iPhone and iPad, Android phones, and Android and Chrome OS tablets with minimal effort.

FEATURES

- Domino applications can be directly accessed online or can be replicated to your mobile device for offline access without modification
- Information is locally encrypted for securing your data
- All original business logic of your applications functions on the mobile device, including LotusScript, complex forms, and buttons
- Utilize mobile device functionality to augment your workflow. Access cameras, photos, and files on your device, add location information, and more
- Access recent applications from the home tab
- Includes panagenda MarvelClient at no additional cost, allowing seamless configuration of your HCL Nomad client

Unleash the power of your desktop Domino application on mobile and reduce operational costs and increase productivity. Deploy HCL Nomad to immediately take advantage of secure online and offline access to existing HCL Domino applications. Or create new mobile apps using the platform you already know and use.
