Introducing GroundControl Enterprise
New ideas for automating big mobility

GroundControl is unique software to speed iPhone and iPad imaging and MDM enrollment by 80%. Staff may **re-image Apple mobile devices** as often as needed, creating new solutions for IT-free iPad data sanitization and self-healing iPhone fleet management.

Large hospitals and corporations need a mobile management solution that's ready for scale. GroundControl Enterprise is built to meet that challenge. Our patented cloud/local hybrid architecture scales to thousands of endpoints and hundreds of thousands of mobile devices. Customers include **five of the top 20 U.S. hospitals** and **three of the 20 largest global corporations**.

Unlimited Scale
Use GroundControl for every size organization, with no limits on the number of users, sites, or work-flows. Create multiple organizations to delegate administration to divisions or buildings.

Custom Attributes
Add metadata to devices and sites to record build-ing, unit, username, timezone, … whatever you can imagine. You can then use these values to select the right image, or personalize images by customizing device names, wallpaper text, or MDM users & groups.

External Integration
Set up GroundControl Enterprise to integrate with external systems with deployment webhooks and a GroundControl API. With integration, you may push device MAC addresses to your WiFi controllers, look up patient information from your EMR, or trigger actions on tethered devices.

Smart Hubs
Deeply integrate with select enterprise-class USB docks and cabinets such as the Datamation UniDock. GroundControl can toggle LEDs which greatly simplify user interaction: Yellow=Busy, Green=Good.

Self Healing
If the device is acting up, the user simply taps a "Heal Me!" button on their iPhone. On the next connection to the charging station, GroundControl takes over, re-provisioning the device as new. Self Healing means your institution need less IT time and fewer spare iPhones — instant ROI.

Single Sign-On
Simplify user management by offloading authenti-cation to your existing system. GroundControl works with any SAML 2.0 identity provider.
