

Mobile Security Suite

Mobility has transformed the way we work while also introducing a broad range of risks for IT and security teams. Your employees have access to the world at their fingertips, and as they go mobile, so does your data. It is now crucial to secure your endpoints and your network against the growing storm of cyber threats and ensure that your data does not fall into the wrong hands. At the same time, noncompliant or illicit conduct can expose your business to legal complications, while excessive data use for non-business purposes can damage both productivity and your budget. Wandera takes care of all these drawbacks and more, letting you take full advantage of the mobility revolution.

> Better together

Wandera has partnered with MobileIron to provide a full end-to-end mobility solution that provides the highest level of insights and analytics across mobile devices used in the enterprise. Combining MobileIron's Unified Endpoint Management (UEM) functionality, such as device management and information protection, with Wandera's multi-level architecture, customers can apply intelligent policy to fully manage data usage and flag potential risks at the endpoint and network levels.

The joint solution supports iOS, and Samsung Android and deploying via MobileIron Core and Cloud is quick and easy.

> Challenge

Organizations with a mobile workforce don't have visibility into how devices that access their corporate data are being used.

Mobile Security Suite offers:

- > Real-time insights and analytics on mobile risk
- > Coordinated policy actions in the event of a cyber attack
- > Continuous Conditional Access on devices managed by MobileIron Core and Cloud

Benefits:

- > Immediate remediation of unacceptable device or usage-based risks
- > Restrict access to corporate tools based on device risk
- > Streamlined device management for administrators

Multi-level framework

Endpoint Application

Best-in-class detection

- > Secure endpoints
- > Analyze apps
- > Educate end users

In-Network Protection

Cloud Gateway

Protection for any mobile device

- > Prevent incoming threats
- > Block network attacks
- > Safeguard user privacy

Policy for corporate devices

- > Enforce usage policy
- > Filter access
- > Eliminate Shadow IT

Administrative Console

Enterprise management

- > Real-time insights
- > Audit of security events
- > Enterprise integrations

Mobile Data Policy

› End user & admin insights

Our admin portal provides real-time analytics on your mobile usage, enabling you to make meaningful policy decisions based on the trends you identify. Easily educate users on their activity with data alerts and notifications flagging behavior like excessive tethering, all available through the end-user app.

› Define and limit non-business use

Restrict access to entire categories, such as gambling, or for specific domains, letting you define and limit non-business use on your own terms. Categorize internet activity, control roaming and tethering on the endpoint, and see what apps are installed—as well as how much data is used. Monitor and block illegal or unacceptable use and maintain compliance with GDPR and other regulations for specific industries.

› Fully customizable

Create policies that apply to different groups in different circumstances and switch devices from one setting to another with ease. Set custom caps when certain data usage thresholds are reached, and even apply policies for different device types or geographies, enabling you to prevent high roaming charges.

Mobile Security

› Advanced machine learning

Wandera leads the charge in applying data science to the challenges of mobile security. Through a unique architecture, MI:RIAM, our advanced threat intelligence engine, applies the industry's largest data set to identify and eliminate all known and unknown zero-day threats in real time.

› Multi-level security: endpoints and the network

Wandera's Cloud Gateway architecture goes beyond endpoint protection to secure your mobile traffic, blocking zero-day threats like phishing sites and malicious domains in real time. Additionally, Man-in-the-Middle attacks can be neutralized by initiating a secure VPN tunnel, keeping your users and corporate data safe with no user involvement required.

› Continuous Conditional Access

Wandera integrates with MobileIron Cloud and Core providers to enable continuous conditional access. We communicate device-based risk status to enable organizations to control access to corporate data and applications.

Use Cases

› Roaming Reduced

One of the world's leading management consulting firms deployed Wandera with MobileIron to help control their data usage. Consultants travel frequently, and this organization's data bill was millions of dollars every year. Wandera Mobile Data Policy for MobileIron now helps the firm set granular data caps when roaming, and blocks unnecessary file syncing over cellular networks.

Implementing Wandera let the firm stay within their mobile data plan, reducing roaming costs by 59%.

› Zero Trust: Zero Risk

Wandera's Mobile Risk Management Suite helps one of the top-tier motor racing teams protect sensitive corporate data and achieve a zero-trust model. Wandera identifies risky web content - such as phishing links, data leaks and shadow IT - in real time, and builds a risk posture for each device. This posture is signaled to the MobileIron UEM, so that when a device exceeds the configured risk threshold, MobileIron Core is able to restrict access to corporate tools.

Wandera stops a brand new phishing attack every two minutes.

› Content Filtered

An enterprise oil company uses Wandera's Mobile Data Policy to enforce acceptable usage policies - anyone trying to access inappropriate content is blocked, and given information on why that content has been filtered. The solution is deployed seamlessly to the mobile fleet using MobileIron, with a 'zero-touch' approach.

Wandera blocks an average of 218 attempts to access restricted content per day for this organization.

For more information, get in touch with one of your MobileIron representatives.

Wandera is a leading mobile security company, providing multi-level protection against cyber threats for users, endpoints, and corporate applications. Security teams worldwide rely on Wandera to eliminate threats and enhance user privacy.
