

# SAP-Connector

The Prevolution SAP-Connector offers a convincing simple and at the same time pathbreaking solution, for the so far very extensive connection between a Cherwell system and the SAP Solution Manager.

Up to now the junction between Cherwell Service Management and the SAP Solution Manager has been a laborious and cost-intensive project, mainly because of the difficult customization of Web Services and hardly calculable SAP development work. In particular regarding SAP, users had to bear remarkable costs.

Due to the SAP-Connector, Prevolution offers now a convincing alternative to the so far known solutions. Based on an innovative approach – an intelligent coating – the recent breakline between the both systems can be resolved.

The result is a standardized, robust and maintainable interface, usable for various process specifications without any need for middleware.

Based on this new integration, users benefit from relevant cost and time savings and can gain the respectively best from both solutions.

## Benefits at a glance:

- Implementation efforts are reduced to just 8 – 10 days
- Extensive cost savings for implementation
- Offers more flexibility within the Cherwell process
- standardized, robust and maintainable interface
- without any requirements for middleware
- process- and data-integration for incident and change-process
- generates tickets automatically within SAP DynPro
- widest automatization of the operative processing
