

SyncServer

Synchronize tasks and calendar entries between Cherwell and MS Exchange to avoid multiple input and information loss.

This Prevolution mApp offers you a solution to combine Microsoft Exchange with your Cherwell system to synchronize them in a mono- and bidirectional manner. The SyncServer is easy to configure and will optimize your workflows noticeably.

Use our application for your authorization processes and synchronize the Out-of-Office notifications of MS Exchange/Outlook with Cherwell, so that either an alert regarding the absence of the responsible person occurs or the information is sent directly to the deputy. As a result the process will run reliably and ensure approvals in a timely manner.

Or simplify the workflow of your Change Process. Because of the SyncServer the Cherwell Change calendar is displayed in Outlook and so it is easy to remind all participants about relevant decisions and tasks.

As well you can transmit Cherwell based duties to Outlook, which is very useful to keep e.g. external members of a project informed about timing, process and mission.
