whoosh ivants

manages secure communication between the cloud and the machines on premise

With whoosh ivants any task can be executed on the customer's endpoints via ISM Quick Action or predefined workflows. This reduces the need for remote control sessions to manually run routine tasks on your endpoints, like disk cleanups, re-enabling a local admin account, controlling windows services, gathering local device information, and many more.

The IT-depatment can work much faster without sacrificing security.

FAST

The IT-department can react much faster if problems occur on premise. Client requests can be processed from within ISM. There is no more need for VPN-Tunnels, remote control sessions or on-site visits to handle standard tasks like resetting passwords. Many solutions can be fully automated.

EFFICIENT

whoosh ivants handles ivanti SM in a resource-friendly manner. It can act as a proxy for every single site, distributing tasks between ivanti SM and the user's computer. This enables whoosh ivants to require as few of ivanti SM's capacities as possible.

RELIABLE

whoosh ivants works safe and sound: It communicates with ivanti SM via an HTTPS-encrypted connection, guaranteeing the safety of your data. In addition, whoosh ivants also works reliably for clients who are not able to reach their proxy ivants. In this case, they directly communicate to the ivanti cloud software.

EASY

whoosh ivants is installed and ready for action within minutes. The Setup and configuration effort is minimized; new applications can be integrated and executed easily. All you need to know is what application you want to execute on which machine. Our addon does the rest.

Who we are
We do what we say we do

Are you tired of this one annoying IT-problem that you have to deal with every day!? We do like such problems. Because we create solutions especially for you ... and others. Easy to operate. For a fair price within your budget limits.
More freedom in your life. For you.
